

Autonomous Cyber Operations

REDEYE is a containerized cyber operations planning and orchestration platform that provides planners, operators, analysts, and leadership with a unified environment to plan, approve, execute, and review cyber operations. Built on a human-in-the-loop architecture, REDEYE leverages SI agents to assist with analysis, planning, recommendations, and execution while ensuring human operators retain authority over mission scope, tool execution, and release decisions.

| Capabilities

- ▶ *Autonomous SI Agent Orchestration*
- ▶ *Automated Operational Workflows*
- ▶ *Accelerated Cyber Analysis*
- ▶ *Human-Directed Decision Superiority*
- ▶ *Mission-Focused Recommendations*
- ▶ *Delivering at Scale*

WHY INTELLIGENESIS

Technology built by people who know the mission.

SI • Cybersecurity • Mission Engineering • IG Labs® • 19+ years building SI for the Intelligence Community
